Install Automatic Gates to your Property

With crime relentlessly on the increase, more and more people are installing electrically controlled gates to their properties to protect their families and their assets.

Who Are We?

MB Electrical was established in 1970, as an electrical contracting and service company. Totalling 40 years experience within the electrical industry, our fully qualified electricians offer a full range of services, from the simple replacement of heating elements to the full design and installation of housing and industrial requirements.

Based in Clevedon, MB-Electrical services the greater Auckland area.

Centurion Systems has been developing and manufacturing gate and access automation equipment for over 20 years and has established itself as one of the leading brands in the world market.

What can we offer you?

Security

Centurion gates will move your first line of defence to your gateway rather than your front door. Electrically controlled gates are a much better deterrent to the opportunist, the car thief or vandal. In conjunction with a video or audio intercom, you can control who has access to your premises from the safety of your home or office.

Practicality

Keep your children safe from passing foot and road traffic. Protect and contain your stock and give yourself peace of mind knowing your gates will close automatically behind you as you leave your property. Stop passing motorists from using your driveway as a turning point or lay-by.

Convenience

Forget about getting out of your car to open your gates every time you enter or leave your property. All automatic gate openers have back up batteries in the event of a power cut and can be activated from a distance of up to 50m so there is no waiting around as you approach.
