Reasons to smile from Denture Direct

If you are looking for a good pair of dentures or dental prostheses, it certainly doesn't hurt to look at options.

Before you fork out your hard earned money, it would be worth your while to spend just 20 minutes with Denture Direct.

It's a decision you won't regret as you are getting something unique - an improvement in physical appearance and dental health that will positively change your outlook towards life.

Denture Direct, a division of Auckland City based Prosthetic Processes, finally gives you the freedom of choice.

They manufacture the highest quality implants, crowns and bridges, ceramics, provisionals, prosthetics, partial dentures and orthodontics right here in New Zealand.

Before you say "not another offer!" here's news: dentists have been using their services since 1939. That kind of pedigree is not something to be scoffed at.

"We bring to New Zea-

land quality engineered fixed and removable dental prostheses with craftsmanship and service to match," says owner Peter Boekhout.

So how do you benefit? One, you can buy their products directly and get fitted at their brand new clinic in Hobson St.

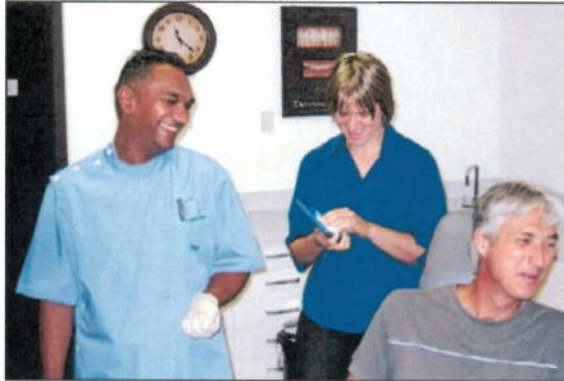

Because they complete all work in-house, you get hassle-free service without the need for outsourcing.

Anybody who has gone a couple of weeks without dentures would appreciate the importance of quick turnaround times.

Two, because all Denture Direct products are New Zealand made, you get full service and warranties. This also removes the health risks associated with availability of cheap imports.

But what has made Denture Direct a leader in its field is its dental team. Des Reddy, for instance, is a New Zealand qualified dental technician with 14 years experience and a Post Graduate Diploma from Otago.

All their dental

Winning formula: At Denture Direct patients get superior customer service and made in New Zealand products. Here Des and Bronwyn help their patient relax.

technicians are members of NZDA, OPAH and NZIDT.

Des is quite proud of the fact they make everything as per New Zealand standards.

"What goes into your dental prostheses also goes into your mouth, so insisting on quality isn't such a bad idea," he says. You can't argue with that.
